

The Carbon Nanotube Specialist

Dear Attendees,

Welcome to the Nanocomposites Conference 2009. It is a great pleasure to have you join here in Brussels.

As in 2008, Nanocyl has decided to sponsor the conference to promote the use and the understanding of Nanomaterials in Composites. In an economic slowdown climate, the development of new technology is critical to increase market shares and maintain profitability. In this context, Nanomaterials offer reliable innovative solutions. We hope the Conference will be valuable for everyone

Since 2002, Nanocyl has been producing high quality carbon nanotubes and today Nanocyl is proud to be one of the leaders in this industry. The development of Nanocomposites solutions has been as the source of Nanocyl success in the market.

Our products fully meet the requirements of customers active in the electronics and automotive industries. Nanocyl NC7000 Carbon Nanotubes are today commercially used as conductive additives in polymers for automotive fuels systems, electronic packaging and hard disk drives trays & components.

I hope the delegates will leave the conference with new contacts and a better understanding of nanotubes and nanotechnology for the further development of new products.

I look forward to welcoming you to the StanHope Hotel in Brussels.

Francis Massin,

CEO
